

Realignment Trilogy Appendix Dashboard			
A.3 <u>Praxeological text</u> Status: <u>Transitional</u> Key Synopses: Full credit preempts ongoing liquidity preference realignment; constant liquidity time preference signals to prior savings alone. Alignment Note: Axiomatic, but not fully coherent, full hybrid regimes requires to constrain full irreparability (on-chain lending volumes expanding under full-rusee discipline).		A.2 <u>Transmission-Mechanism Metrics</u> Status: <u>Transitional</u> Key Synopses: US \$2.8T + with elastic market advice; BTC full-rusee lending volumes \$85.8B (11% on-chain share). Alignment Note: US \$2.8T + with elastic market advice; protocol clearing renders them structurally irreparable, with on-chain volumes conforming full-rusee discipline. Link to Log: Tab #A.1	
A.3 <u>Historical Epistemic</u> Status: <u>Transitional (unchanged)</u> Key Synopses: German Realignment – organization form, Eurozone dollarization, and pre-1914 gold-standard cases establish the historical baseline. Alignment Note: Constant directional support for neutralization; transitional distributional shifts required. Link to Log: Tab #A.1		A.4 <u>Forward Metric Tracking</u> Status: <u>Transitional</u> Key Synopses: Top 1% wealth share 31.2 %, global Bitcoin ownership 1.1 %. Alignment Note: X-shaped divergence between narrowest, realignment cycle strength remaining at 4. Link to Log: Tab #A.1	

Date	A.1		A.2		A.3		A.4		Realignment Index	Top-1 % Sparkline	BTC Self-Custody Sparkline		Target Threshold
	Status	Snapshot	Status	Snapshot	Status	Snapshot	Status	Snapshot			Detailed	Loa	
15-Mar-24	Transitional	Flat credit distortion active; Bitcoin sovereignty isolates signals	Transitional	Multiple effects remain fully functional in fiat systems while Bitcoin's immutable issuance schedule eliminates the very channel. Elastic broad-money creation in the fiat layer still enables discretionary liquidity injections.	Transitional	Historical stabilizations show tool loss but pain	Transitional	Top 1 % at 32.6 %; adoption ~5.3 %; cycle strength 2	2			1	
15-Jun-24	Transitional	Flat credit distortion active; Bitcoin sovereignty isolates signals	Transitional	Flat credit distortion active; Bitcoin sovereignty isolates signals	Transitional	Historical stabilizations show tool loss but pain	Transitional	Top 1 % at 32.6 %; adoption ~5.8 %; cycle strength 3	2				
15-Sep-24	Transitional	Flat credit distortion active; Bitcoin sovereignty isolates signals	Transitional	Flat credit distortion active; Bitcoin sovereignty isolates signals	Transitional	Historical stabilizations show tool loss but pain	Transitional	Top 1 % at 32.4 %; adoption ~6.2 %; cycle strength 3	2			1	
15-Dec-24	Transitional	Flat credit distortion active; Bitcoin sovereignty isolates signals	Transitional	Multiple effects remain fully functional in fiat systems. Elastic broad-money creation in the fiat layer still enables discretionary liquidity injections.	Transitional	Historical stabilizations show tool loss but pain	Transitional	Top 1 % at 32.3 %; adoption ~6.6 %; cycle strength 3	2			1	
15-Mar-25	Transitional	Flat credit distortion active; Bitcoin sovereignty isolates signals	Transitional	Flat credit distortion active; Bitcoin sovereignty isolates signals	Transitional	Historical stabilizations show tool loss but pain	Transitional	Top 1 % at 32.1 %; cycle strength 4	2			1	
15-Jun-25	Transitional	Flat credit distortion active; Bitcoin sovereignty isolates signals	Transitional	Fiat multipliers continue to operate through ongoing credit expansion and forward guidance. Bitcoin protocol ceding renders them structurally inoperable. Multiple effects remain fully functional in fiat systems while Bitcoin's immutable issuance schedule eliminates the very channel through which Keynesian management tools have historically transmitted.	Transitional	Historical stabilizations show tool loss but pain	Transitional	Top 1 % at 32.0 %; adoption ~7.3 %; cycle strength 4	2			1	
15-Sep-25	Transitional	Flat credit distortion active; Bitcoin sovereignty isolates signals	Transitional	Flat credit distortion active; Bitcoin sovereignty isolates signals	Transitional	Historical stabilizations show tool loss but pain	Transitional	Top 1 % at 31.9 %; adoption ~7.8 %; cycle strength 4	2			1	
15-Dec-25	Transitional	Flat credit distortion active; Bitcoin sovereignty isolates signals	Transitional	Elastic broad-money creation in the fiat layer still enables discretionary liquidity injections; on-chain Bitcoin lending volumes expand solely under full-reserve constraints, confirming the structural ceiling. Fiat multipliers continue to operate through ongoing credit expansion and forward guidance. Bitcoin's bearer-asset design and fixed supply cap prevent any protocol-level amplification of liquidity preference shifts.	Transitional	Historical stabilizations show tool loss but pain	Transitional	Top 1 % at 31.8 %; adoption ~7.9 %; cycle strength 4	2			1	
15-Mar-26	Transitional	Flat credit distortion active; Bitcoin sovereignty isolates signals	Transitional	Flat credit distortion active; Bitcoin sovereignty isolates signals	Transitional	Historical stabilizations show tool loss but pain	Transitional	Top 1 % at 31.4 %; adoption ~8.4 %; cycle strength 4	2			1	
15-Jun-26	Transitional	Flat credit distortion active; Bitcoin sovereignty isolates signals to prior savings alone	Transitional	Fiat multipliers continue to operate through ongoing credit expansion and forward guidance. Bitcoin's bearer-asset design and fixed supply cap prevent any protocol-level amplification of liquidity preference shifts, with on-chain volumes confirming full-reserve discipline.	Transitional	Historical stabilizations show tool loss but pain	Transitional	Top 1 % at 31.2 %; adoption ~8.8 %; cycle strength 4	2
